# Tejas Warehouse Management

## SHOES.COM

(a subsidiary of Olympia Sports)

In 2021, Tejas went ahead to work on a challenging implementation of Warehouse Management solution for Shoes.com with Tejas WMS integrated with Salesforce OM. Shoes.com had a big warehouse fulfilling variety of retail orders with varied complexities in terms of type, category and number of order items to be picked, packed and shipped efficiently in a best possible cost-effective way. Tejas were able to fulfil every complex warehouse operational use case that were thrown at.

### Fulfilment Model:

- ❖ Own warehouse self-fulfilment with pickers and packers operating throughout the day

### Implementation Bits:

- ❖ Complex pick batching rules were defined to optimize the pick process by generating best possible pick routes.
- ❖ Reports and dashboards were developed for displaying and measuring the efficiency of warehouse personnel at different stages of warehouse fulfillment operational flow.
- ❖ On the pack stage, rate shopping was done from multiple shipping carriers like Amazon Prime Shipping, Easy POST and FedEx to get the optimal best shipping rate before the package was shipped
- ❖ Print automation was developed to auto print Pack Sheets via A4 printer (regular) and Labels via Zebra printer.

### Implementation Timeline:

**TWMS Implementation: 4 months.** This includes implementing NetSuite ERP Integration for Purchase Orders processing, Return module integrating with Salesforce OMS
